

## DIY Hexagon Frames

Print out the template on A4 paper, preferably set to borderless print at 100%. Attach your instagram shots with spray adhesive (printed at 50mm x 50mm square) using the white boxes as a guide (NB: the boxes are 48mm square, so you have space to cover the entire square.) Then attach to foamcore board using adhesive spray. Cut out using a stanley knife. Then adhere hexagons with removable tape in the pattern you like.
